Comfortable milking for operators and animals – with the Global 45

First-class milking with the Global 45 means:

A comfortable and problem-free milking process for both operator and animal. The Global 45 also provides just the right amount of space for every breed of cow. Milking in the Global 45 means the following as far as the milker is concerned: comfortable operating routines

and a lighter workload which leave him/her free to monitor the animals carefully. The modern design stallwork is made from the highest quality material and can withstand the loads and rigours of milking large numbers of cows.

Open entry

The wide entry area invites your cows into the milking parlour: Quickly, comfortably and without any stress, the cows reach their milking places where they can assume the best position for undisturbed milking. Once the last animal has reached its place, the entry gate closes flush with the last milking stall, so the whole group is properly positioned and the following animals are ready and waiting to enter the parlour.

First-class comfort: Optimum group indexing

The breast rail, which is moulded to the contours of the animal, has a continuous indexing function to ensure that your cows are in the best position for milking.

The adjustable breast rail can be set for the breed and size of animal at any time, giving the best possible level of cow comfort for stress-free and effective milking.

First-class flexibility

Available in sizes of 2x6 to 2x40, including a single-sided option, there is a Global 45 for any size of herd; if your herd grows then you can simply extend your milking parlour by adding individual modules. The Global 45 is characterised by a long service life, low running costs with a high level of stability and safety for both operators and cows.

Due to its low overall height, the Global 45 can often be installed in existing buildings thus saving on expensive building costs.

MultiLine Option

Milking is enjoyable in this clear, easy-to-maintain environment. The milking technology that is integrated in MultiLine is protected from dust and moisture. There are two handles that enable the MultiLine cover to be opened easily to carry out maintenance. MultiLine helps to keep the noise level down in the milking parlour for operators and cows.

*Management on the spot:

the milking parlour"*

Clean, contoured and ergonomic

The stall is designed to fit the natural contours of the cow to ensure that your cows have all-important space and freedom of movement, thus promoting relaxed milking. This optimum positioning also provides unrestricted access to and a clear view of the udder. The sturdy stainless steel dung shields protect the milker from getting dirty – a cleaner workplace makes work more enjoyable!

Freedom for you.

The spacious entry area and the Fast Exit system make the Global 45 one of the most efficient milking parlours, with reduced cow traffic times resulting in higher throughputs.

Rapid Exit:

Two steps forward and the milking place is empty!

*Animal-friendly:
The double rump rail and the
oblique outline of the standing place.*

DairyDesignService: Providing advice on site is especially important to us!

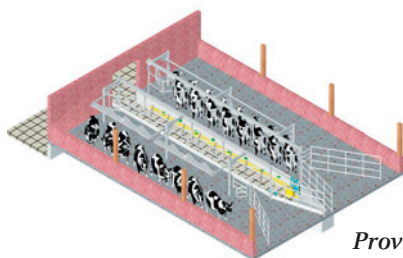

We support you from the very start.

There is a whole host of standard and installation drawings to help you along. We can also produce individual solutions for you on our CAD system. You can immediately see what your proposed installation, which has been planned to meet your individual requirements, will look like, regardless of its size.

Above all, you will profit from the experience of our worldwide network of excellent dairy design experts. Our advice does not stop upon completion of the installation. We will provide your personnel with expert instruction to guarantee that you use your installation to its full potential.

Your satisfaction is our goal:

You can carry out optimum planning with the ProFormance consultancy concept. Your satisfaction means that we have done our job properly! Our products will give you quality and reliability to help your plans turn into reality.

*Providing advice on site –
an important part of the service.*
